

PIIOP Round 2 Regulator Program

Murray Irrigation

Murray Irrigation's regulator program involves upgrading existing manually operated channel regulating gates to automated gates.

In Standard Level of Service areas, existing gates are being upgraded so that they can be remotely operated. Once upgrades are complete, this will enable up to two changes per day.

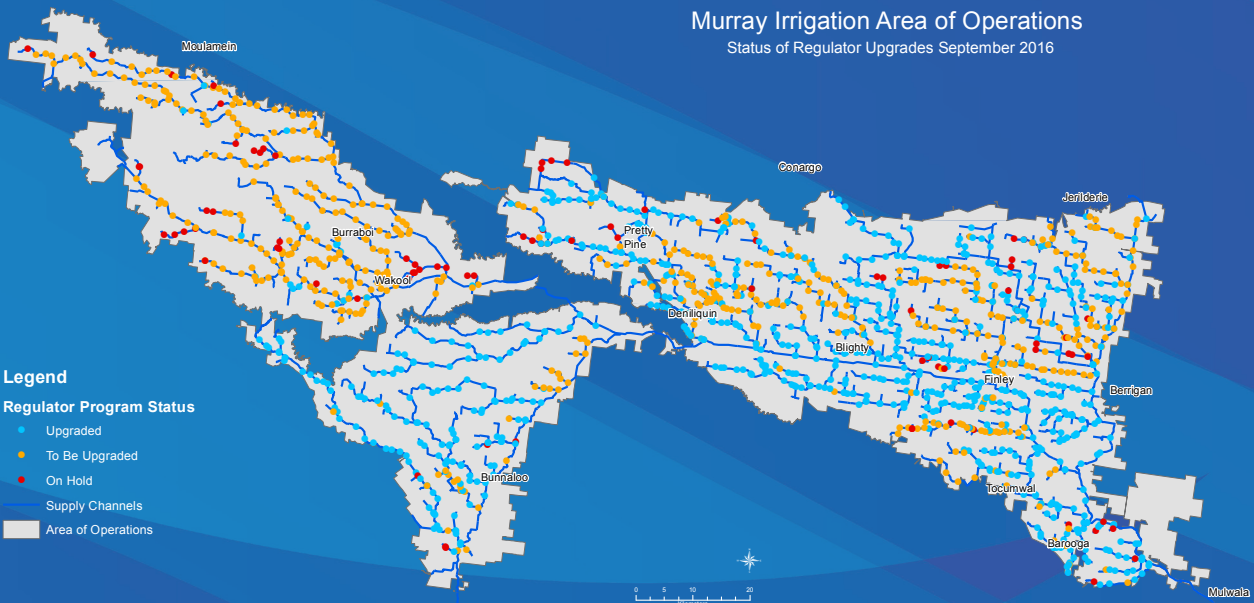

In the High Level of Service areas, all of the gates are upgraded and will operate through automation. Once the system upgrades are complete, this will enable up to four changes per day.
